

Form & Frys Maskinteknik Folding Machines

Four folded products "traditional shape"

Form & Frys Maskinteknik's Folding Machines "**BETA**" & "**CHARLIE**" were developed primarily for folding traditional Danish Pastries but both machines are well suited to folding savoury products in both puff and short pastry.

The patented "folding wing" technology used on Form & Frys Maskinteknik folding machines will give a perfect fold every time, even when products contain large amounts of savoury filling.

Fillings can include sauces mixed with cheese, vegetables, meat, chicken, fish and shellfish. Your imagination sets the limit.

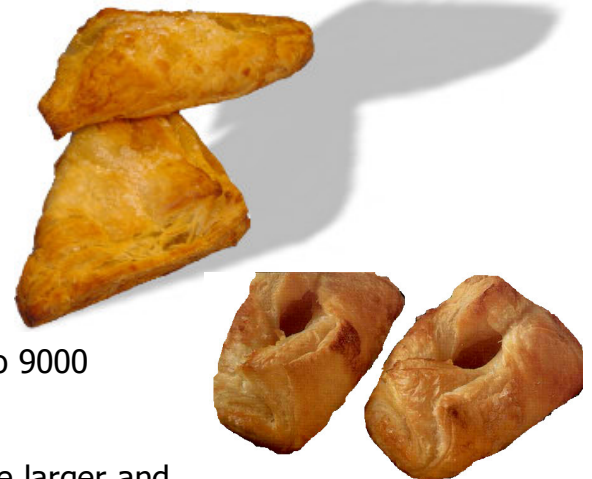

Form & Frys Maskinteknik also have a range of filling machines capable depositing the required fillings. The range includes piston and rotary filling machines. Our filling machines are able to handle fillings containing relatively large particles. The Rotary Filling Machine can handle sensitive fillings without damage and is able to place a shaped deposit.

The **Charlie** folding machine & a piston-filling unit is our standard unit for the flexible industrial bakery requiring maximum flexibility and quick product change-over in an industrial environment. The

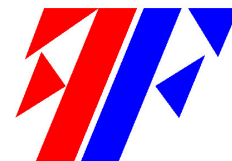

Charlie comes as standard with one set of tools which can produce 2 and 4 fold products from a variety of base dough square sizes 75mm, 100mm or 125mm.

Additional sets of tooling can be added to produce other sizes or types product (eg. "Turnover" or "Twist") seen ⇒ Capacity of Charlie machine varies to tool size form 5000 to 9000 products per hour.

The **Beta** folding machine & Rotary filling machine is for the larger and high-speed industrial bakery and is built specifically for one type and size of product. Capacity for a typical Beta machine is 25.000 products per hour, a little depending on the depositor type and number of rows.
